rohanhandore.com | github.com/RohanHandore | linkedin.com/in/rohan-handore-4786b3233

Work authorisation: legally authorised to work full time in Ireland on Stamp 1G (valid to September 2027); will need employment permit sponsorship beyond that and is eligible for the Critical Skills Employment Permit.

EXPERIENCE

Application Support Analyst (on-call)

Apr 2026 to present

Global Payments, Dublin, Ireland

- Own monitoring, troubleshooting and availability of critical, customer-facing **payment** applications in a tier - 1 payments estate, including partner services, as one of the on-call owners on a 24x7 rotation.
- Handle **incident response** end to end on production systems: read application and system logs with Kibana and AWS CloudWatch, isolate the fault, drive fixes with development and infrastructure stakeholders, and write the runbooks and documentation that make the next event shorter.
- Run routine application and network health checks, release management activities and change under ITIL-aligned practice with auditing and an evidence trail for every action.
- Automate repetitive operational work with **Python** and Bash (log parsing, health checks, scheduled validation and data fixes), cutting manual effort and validating each fix outside production first.
- Technologies: Linux administration, AWS (CloudWatch metrics, logs and alarms), Kibana, SQL, REST APIs, Python, Bash.

Full Stack Web Developer (contract)

Feb 2026 to present

Artemee Web Services, Dublin, Ireland

- Build web applications, product features and internal tools end to end (frontend and backend) on a freelance contract for a Dublin agency, shipping work that business and customer teams depend on, from requirements through to production deployment.
- Work in **JavaScript**, jQuery, **HTML**, **CSS**, **PHP** and **Python**: turn ambiguous requirements into clear technical designs, implement them, and test each change before release.
- Rebuilt a client website (Nifty Driver) to a three-week deadline and deployed it to the production server, covering layout, responsive behaviour and content structure.
- Work inside collaborative codebases across multi-person projects: lead small projects independently, contribute to larger ones alongside peers, and write the documentation and checklists each project runs on.

Guest Lecturer / Technical Instructor (Part-time)

Mar 2023 to Jan 2024

College Workshops, India

- Delivered lectures and live coding sessions on data structures and algorithms: arrays and strings, recursion, hashing, stacks and queues, linked lists, trees, heaps, graphs, dynamic programming and complexity analysis.
- Taught system design fundamentals: requirements, API design, data modelling, caching, replication, queues, scalability trade-offs and observability (logs and metrics).
- Created practical assignments built around a testing mindset: test case design, edge cases and debugging discipline.

Software Engineering Trainer / Technical Instructor

Dec 2022 to Jan 2024

TechnoKraft Training and Solutions Pvt. Ltd., Nashik, India

- Designed and delivered curriculum for early-career engineers, focused on maintainable code, debugging discipline and professional engineering habits.
- Created structured learning plans and practical labs reinforcing clean APIs, data modelling and production-style problem decomposition.
- Ran recurring sessions, tracked progress and gave actionable feedback for improvement.

Software Engineering Intern

Jun 2022 to Aug 2022

Eluminus Technologies Pvt. Ltd., Nashik, India

- Implemented features and fixed bugs across Java, Python and SQL services with Git branching, code review and basic testing with reproducible steps.

EDUCATION

MSc Big Data Management and Analytics

2024 to 2025

Griffith College Dublin | 70.5%

big data management, distributed systems, database systems, cloud architecture, applied statistics, delivered through team projects with written reports and presentations.

BSc Computer Science

2020 to 2023

Savitribai Phule Pune University, India | 82%

computer networks, operating systems, database systems, software engineering, programming fundamentals.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, PHP, SQL, C++ and C# (basic).
- Backend and APIs: REST APIs, JSON, OAuth and JWT, PostgreSQL, MySQL, MongoDB, Firestore, unit and integration testing.
- Cloud and infrastructure: AWS (EC2, S3, CloudWatch), GCP (Cloud Run, Cloud Logging), Docker, Linux administration, CI/CD with GitHub Actions.
- Monitoring and support: Kibana, Splunk, CloudWatch, ITIL - aligned incident, problem and change management, ServiceNow, Jira, Confluence, on-call operations, SLA adherence, root cause analysis.
- Ways of working: clean code, code reviews, debugging, documentation, automation with Python and Bash, working to requirements with stakeholders, mentoring.
- Languages spoken: English, Marathi, Hindi.

PROJECTS

Proxy Censorship Agent for LLMs (Python)

designed a proxy layer to intercept and evaluate prompts and responses for policy-based filtering and safe handling of untrusted inputs; kept policy changes modular so they never touch core logic, with repeatable regression checks.

Python Trading Bot (Python, APIs)

built an automated trading workflow with deterministic strategy evaluation and robust error handling; ran strategies in simulation first and added scheduled runs, logging and replay testing.

Second-Brain Web App (Node.js, MongoDB)

personal journalling, todo, reminder, important-dates and vault application; the data layer behind a self-hosted personal assistant with Telegram and WhatsApp automation.

Stock Market Analysis Application (Python, FastAPI, Docker, GCP Cloud Run)

containerised FastAPI service and data pipeline with Cloud Logging, alerting, health checks and runbooks; response times improved through query and cache tuning.

CERTIFICATIONS

- Google Professional Data Engineer; AWS Solutions Architect foundations training.
