Work authorisation: legally authorised to work full time in Ireland on Stamp 1G (valid to September 2027); will need employment permit sponsorship beyond that and is eligible for the Critical Skills Employment Permit.

EXPERIENCE

App Ops Engineer (on-call) - Global Payments, Dublin, Ireland - Apr 2026 to present

- Keep **customer**-facing **payment** applications and the **reliable** data pipelines behind them available for a meaningful **fraction** of a tier-1 European **payments** estate in **financial services**, covering **fraud** and **risk** controls on **transactions**, with **Linux** administration, **AWS** cloud **infrastructure** and **observability** built on CloudWatch metrics, logs and alarms plus Kibana, as one of the on-call owners on a 24x7 rotation.
- Own **incident response** end to end on **production systems** that carry **sensitive data**: read application and system logs, isolate the fault, drive fixes with development, infrastructure and **security** stakeholders, and write the runbooks and documentation that make the next event shorter.
- Work across **data systems** and **data stores** (SQL, **REST APIs**, file and message transfers): lawful data access and data access requests run through their lifecycle, from intake and scoping to authorized retrieval and review, with auditable records and an evidence trail so the right records are located and handled accurately and reproducibly, in line with data protection law and internal policy.
- Automate the repetitive work that used to be done by hand with **Python**, Bash and **AI** tooling (log parsing, health checks, data fixes, scheduled validation), **building solutions** that remove toil, **leveraging AI tools** to accelerate development while applying **critical thinking** and **professional judgement** to **review**, **refine** and **validate** every output, spotting **new opportunities** for automation as they appear, and validating each fix outside production first.

Full Stack Web Developer (contract) - Artemee Web Services, Dublin, Ireland - Feb 2026 to present

- Build **web applications**, **software products** and internal tools end to end as a **full-stack** developer (**frontend** and **backend**) on a freelance contract for a Dublin agency, in **JavaScript**, jQuery, **HTML**, **CSS**, **PHP** and **Python**, shipping **technology** that **business** and **customer** teams depend on, from requirements through to production deployment.
- Turn ambiguous requirements into clear technical designs: scope the workflow with the client, implement least-privilege access and approval gates where a change matters, and test each change before release with **code review practices**, **Agile** planning and **clear written communication** to **stakeholders**, so the work stays efficient and predictable.
- Work inside **large code bases** that are maintained **collaboratively** across multi-person **projects** and **team members**: **lead small projects** independently and contribute to larger ones alongside peers, sharing knowledge on **unfamiliar systems** with **mentoring** and written guidance, and **creating** the documentation and checklists each project runs on.
- Rebuilt a client website (Nifty Driver) to a three week deadline and deployed it to the Artemee production server, covering layout, responsive behaviour and content structure, **creating** the frontend and backend work for the release.
- Write the product documentation that ships with each release, and run usability testing so operators get an intuitive experience on tasks that would otherwise need support.

Software Development Engineer - TechnoKraft Training and Solutions Pvt. Ltd., Nashik, India - Dec 2022 to Jan 2024

- Built monitoring dashboards and alarms in **AWS CloudWatch**, set alert thresholds and wrote runbooks that reduced escalations, giving **production services** observability they did not have before.
- Automated routine operational tasks with Python and **Bash** (log parsing, health checks, data fixes), reducing mean time to resolution by 30 percent.
- Coordinated blue green and rolling deployments through **GitHub Actions CI/CD** and **Docker** with canary validation and rollback, **safely updating production systems** under code review, and isolated faults with Splunk, CloudWatch Logs and SQL (MySQL, **PostgreSQL**).
- Learned unfamiliar systems quickly through **independent research** and working with a **mentor** and subject matter experts, then documented them so the rest of the **team** could pick the work up.

Software Engineering Intern - Eluminus Technologies Pvt. Ltd., Nashik, India - Jun 2022 to Aug 2022

- Implemented features and fixed bugs across Java, Python and SQL services with Git branching and code review, plus basic CI/CD and Docker work.

EDUCATION

MSc Big Data Management and Analytics - Griffith College Dublin - 2024 to 2025 - 70.5% - big data management, building **reliable** data pipelines, distributed systems, database systems, cloud architecture, applied statistics, delivered through team **projects** with written reports and presentations.

BSc Computer Science - Savitribai Phule Pune University, India - 2020 to 2023 - 82% - computer networks, operating systems, database systems, software engineering, **programming** fundamentals.

SKILLS

- Languages and engineering: Python, **Java**, **JavaScript**, **PHP**, SQL, **TypeScript**, **Go**, **Ruby** and **Scala** (working knowledge, new **programming languages** learned quickly where the fundamentals are present), **coding** and **programming languages**, object-oriented design, data structures and algorithms, **software engineering**, **REST APIs** and JSON, unit testing, **large code bases**, **code review practices**, **debugging** and **maintain**ing production code.
- Specialised knowledge: **frontend** (HTML, CSS, JavaScript, jQuery, responsive layout, accessibility) and **backend** (Python, Java, PHP, APIs, SQL, PostgreSQL, MySQL, MongoDB), **infrastructure** (AWS, GCP, Docker, Linux, CI/CD with GitHub Actions), balanced with general engineering skills across the stack.
- Cloud, Linux and reliability: AWS (EC2, S3, CloudWatch) and **GCP** (Cloud Run, Cloud Logging) cloud infrastructure, Linux administration and troubleshooting, shell scripting, **Docker**, **CI/CD**, deployments with rollback, **observability**, monitoring and alerting, technical reliability, SLA adherence, Kibana, Splunk, DNS and load balancing basics.
- Data, privacy and risk: **financial services** and **payments** domain knowledge, **fraud** and **risk** awareness on **transactions**, sensitive data and sensitive information, protecting user data, data security, least-privilege access, **audit trails**, provenance, data minimization, safe failure modes, **security** controls, OAuth and JWT, TLS, HTTP and HTTPS.
- Ways of working: an **ambitious builder** who stays **adaptable** to new tools and **adaptable** under shifting priorities, **collaborative**, **focused**, **innovative** and full of **passion** for the craft, with **integrity** and a **professional** approach; **clear** and **independent communication skills** to stakeholders, **team members**, peers and **people** across the business; a **problem solver** who takes **measured risk** and acts with high agency on **complex technical obstacles** and **complex** problems, knows when to unblock himself and when to ask for help, and acts on it **right now** rather than later; **researches** unfamiliar systems, **leading** small projects and **mentor**ing peers, **serving** customer needs and driving **growth**, **business** impact and **products** that work at **global** scale in a changing **global economy**, **markets** and an economy that rewards speed; comfortable in **small teams** where a **small team** owns a problem end to end, with payment-platform conventions (idempotent REST APIs, webhooks, sandbox testing) picked up from documented personal study and vendor engineering writing; Agile, Jira, Confluence, ServiceNow, release management, end-to-end ownership of software used by a large part of the **world**.

PROJECTS

Stock Market Analysis Application (Python, FastAPI, Docker, GCP Cloud Run)

- Built a containerised FastAPI service and data pipeline on GCP with Cloud Logging, alerting, health checks and runbooks, and improved response times through query and cache tuning, using **AI** tooling to speed up development and **rigorous review** of every generated change.

CERTIFICATIONS

- **Google Professional Data Engineer**; AWS Solutions Architect foundations training.
